What is Sudoku?

Sudoku is a puzzle game that basically consists of a grid 9x9. This area is divided into nine 3x3 subareas called boxes. The goal of the game is to fill the entire area with numbers from 1 to 9 according to the following rules:

Each row in the 9x9 grid must contain all digits from 1 to 9, with no repetition.

Each column in the 9x9 grid must contain every single digit from 1 to 9, with no repetition.

Each of the nine 3x3 boxes must contain every single digit from 1 to 9, with no repetition.

The initial puzzle will have some cells pre-filled with numbers, providing a starting point. These given numbers are called "clues."

The player must deduce the correct placement of numbers in the empty cells by applying logic and using the given clues without violating the three rules mentioned above.

The puzzle is solved when you have successfully filled in all the cells with numbers that meet the rules.

Basic strategy

Solving a Sudoku puzzle is hard work with a combination of logic and deduction. Here's a list of essential strategies to help you get started.

Scanning rows, columns, and boxes in one or two directions:

To start solving a Sudoku, check rows, columns, and boxes and find situations where only one number can fit into this cell. The scanning technique helps you solve sudoku puzzles with fun.

1	5			6			3		9
2	8	6						5	
3		9		2					7
4					7	5	2		8
5			5				7		
6	4		6	8	9				
7	3					4		2	
8		1					7	5	
9	7		2		8				3

2	8	6						5	
3		9		2	5				7
4					7	5	2		8
5			5				7		
6	4		6	8	9				
7	3					4		2	
8		1					7	5	
9	7		2		8				3

Let's see some examples. Let's number the boxes from one to nine from left to right. Like any other box in Sudoku, box two must contain 5. Look closely at boxes one and three, and they already have 5s. From this, we conclude that the number five in box two must be in the third row.

Because five cannot be in the first and second rows. Now, we do the same with the columns in the range of the second box; as a result, we get the only place where we can put the number five.

Searching for Single Candidates:

Sometimes, only one number can be in a cell because the remaining eight are already used in the relevant row, column, and box.

Let's look at row 5. Seven of the nine squares contain the numbers 1, 2, 3, 4, 5, 6, and 9, meaning that 7 and 8 are missing. Seven cannot be in square A5 because there is already 7 in that column. Therefore, the seven must be in square I5.

Analyzing techniques

When moving to more complex levels of the Sudoku puzzle, you will find that more than simple scanning methods are needed. Now, it's time for more complex methods.

Hard puzzles require more profound logic analysis. Now you have to make pencil notes. Sudoku pencil marking is a systematic process of writing small numbers inside the squares to denote which ones may fit in. After pencilmarking the puzzle, the solver must analyze the results, identify particular number combinations, and deduce which numbers should be placed where. Let's get acquainted with the methodology of such analysis.

Eliminating squares using Naked Pairs in a box:

In this example, squares C7 and C8 in box seven can only contain 4 and 9, as shown with the tiny pencil marks. We don't know which is which, but we know that both squares are occupied. In addition, square A6 excludes six from being in the left column of box 7. As a result, the six can only be in square B9.

In cases where the same pair can only be placed in two boxes, they are called Disjoint Subsets, and if the Disjoint Subsets are easy to see, they

Solutions

Let's save the Amazon forests together!

Did you know that between 2020 and 2021, deforestation of the Amazon rainforest in Brazil reached its highest level in 15 years, with approximately 13,235 square kilometers of forest lost. The BBC writes about this regarding a report from the Brazilian Space Research Agency (Inpe).

According to the agency, deforestation has increased by 22%. As the BBC notes, this was influenced by the demand for paper and everything made from it. Not only are the Amazon forests home to millions of plants, animals, and indigenous peoples, but they also store vital carbon and slow global warming.
