1. Read the number out loud – this helps remember it better and spot it in the grid.
2. Look for small groups of digits – find 2–3 digits together, then check the nearby area.
3. Search systematically – go row by row or column by column instead of randomly.
4. Take eye breaks – if a number is tricky, pause for a moment to refresh your eyes.
5. Adjust your view – change your angle, rotate the book, or shift your position for easier spotting.
